

I use the XM satellite radio system to stay informed while driving an over-the-road commercial truck on the interstate highway system in all of the country....I then utilize the weather information from XM radio to assist in planning my travel route for each trip.Up-to-date local weather information(on tornados, thunderstorms, winds, etc.) also greatly enhances my safety on the highways.

Since I am paying for this service (and it is not available from the NAB) I urge you to reject NAB Petition 04-160 and continue to broadcast the weather on the XM channels for improved highway safety and better safety for all on the Roads.
